The use of l', n' and t' in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasise the fact that they are used for single letters only in Serbian.

'Shch' and 'sht' invariably represent the letter Щ, in Russian and Bulgarian, respectively, since the pairs of letters (ЩЧ in Russian and ШТ in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet 'The transliteration of Russian, Serbian and Bulgarian for bibliographical purposes' published by the Royal Society, Burlington House, London W1 (February 1953, price 1s.). It represents the system at present in use in Science Abstracts for the transliteration of the names of journals and the names of authors of articles abstracted.

LIST OF JOURNALS

The periodicals and serials listed below are all scanned for material of value for reviewing in the Science Abstracts Publications (comprising Physics Abstracts, Electrical & Electronics Abstracts, Computer & Control Abstracts, Current Papers in Physics, Current Papers in Electrical & Electronics Engineering and Current Papers on Computers & Control). The list includes those periodicals from which all articles in each issue are invariably abstracted, but they are also listed separately at the end ('Journals abstracted completely').

Some of the abstracts are reproduced, with permission, from other abstracting periodicals, and in these cases the name of the abstracting organisation may be given in place of the address of the original journal, where it has not been possible to determine the latter. Further inquiry should be made from the abstracting organisation named; addresses are given at the end of the list ('Abstracting journals and reports').

Abstracts are published only of articles which are believed to be in general circulation, and which should therefore be available in national and scientific libraries, or from the publishers, whose addresses are given in this list. Application should not be made to 'Science Abstracts' for copies of the full text of any of the articles abstracted, or for translations.

For the benefit of those who are unfamiliar with the form and purpose of such abstracting periodicals as 'Science Abstracts', it may be said that each abstract is a summary of an article (or book,

patent, technical report, dissertation, computer programme) published elsewhere, the title of the article (or its English translation) being given at the beginning of the abstract. The 'reference', printed immediately after the title and author, gives the name and date of the journal in which the article was printed and the appropriate pagination. In general, title, author and reference are usually required for the unambiguous identification of an article (e.g. in a bibliography), though the reference alone is sufficient for the location of the article.

The form of the 'reference', giving volume number, issue number, pages and date, will, it is hoped, be self-explanatory. It should be emphasised that the date given refers, in nearly every case, to the 'issue' or 'number' containing the article abstracted; in some cases, particularly when papers are issued separately, the 'volume' when bound may bear a different date. The date given is that recorded on the issue, not the actual date of publication or receipt, unless so stated. When the volume carries no number, the year is given in its place.

For books, the town of publication, the name of the publisher, and the year are given in the reference. For patents and technical reports, the bibliographical information given is shown in example on the preliminary pages of each issue of 'Science Abstracts'.

If no indication of language is given in the abstract, the article may be assumed to be in English. This does not necessarily hold, however, for abstracts reproduced from other abstracting periodicals which give no indication of language.

JOURNALS ABSTRACTED COMPLETELY

The following lists give the names of those journals all of whose scientific and technical articles are abstracted completely by either Physics Abstracts, Electrical & Electronics Abstracts or Computer & Control Abstracts. A certain amount of discretion must, however, be allowed in the interpretation of the phrase 'completely abstracted' as nearly all journals occasionally publish items of non-scientific, transient or trivial character which are, of course, not abstracted.

Some of these journals publish a small proportion of significant articles on subjects not normally considered to come within the fields of interest of 'Science Abstracts' and these articles are still recorded and indexed, although in some cases an abstract may not be included. The number of such articles is too small to weigh against the inclusion of the corresponding journals in the lists, particularly those of national scientific and engineering societies. The absence of a journal title from these lists does not exclude the possibility that the contents of the journal have also been abstracted completely in the sense indicated above, and in such cases the journal title will be added to the list in due course.

AUTHOR INDEX—PART I

Each entry consists of all the authors' names and initials in the order given in the original article, followed by the full title of the article and the abstract number. Authors' names other than the first mentioned are crossreferenced to the first,

e.g. for a full entry:

Collins, J. H., Rubens, H., Zapp, H. R. Properties of gadolinium garnet. . . 0-1234

the following crossreferences appear:

Rubens, H. see Collins, J. H. 0-1234

Zapp, H. R. see Collins, J. H. 0-1234

All names are reproduced in the abstracts and the index with the same spelling as in the original articles; in the case of articles printed in Cyrillic characters, a letter-by-letter transliteration is given. Russian authors' names may appear in Latin-alphabet publications in various forms, due to the use of different transliteration schemes; these names are reproduced as printed in the articles abstracted.

The alphabetical sorting is in word-by-word order (e.g. Van der Merwe is listed before Vanderhagen). Compound names are generally listed under the first component (e.g. Neng-Ming Wang is listed in with the names beginning with N). However, cross-references are included in appropriate places (e.g. Wang Neng-Ming. . . see Neng-Ming Wang).

The Abstract Number given with each entry incorporates the final digit of the year of publication in 'Science Abstracts'; thus, '1-1234' in this index means 'Abstract 1234 in the 1971 volume of this Section of "Science Abstracts" '.
